

SoftPathDx®:

The future of
AP+Genetics is here...

The most comprehensive suite of AP+Genetics modules in the healthcare IT industry

With integration between AP and Genetics, true workflow automation has arrived

SoftPathDx, the diagnostic anatomic pathology and cytology support system from SCC Soft Computer, is part of the world's first integrated AP+Genetics platform. SoftPathDx features a complete set of real-world genetics modules (SoftMolecular®, SoftFlowCytometry®, SoftCytogenetics®, SoftHLA®, SoftGenePortal™) all on a SINGLE PLATFORM.

SCC's AP+Genetics modules address each specialty with discipline-specific applications that are tightly integrated due to their shared platform. This gives the modern AP laboratory the tools needed to automate molecular and flow testing, centralize accession and autoroute, and produce reports that include data from all disciplines in just minutes rather than hours.
